Education

B.Sc. in Computer Science and Engineering

United International University

2023 - Present

CGPA: 3.95 / 4.00 (9th Trimester)

Higher Secondary Certificate (HSC), Science

Dhaka City College

2020 - 2022

GPA: 5.00 / 5.00

Professional Experience

Software Developer

June 2025 – Present

Moner Bondhu

- Build and maintain full-stack web products across client-facing applications and internal operational portals, working end to end from database schema to UI.
- Develop and integrate REST APIs and backend services in Laravel, with MySQL data modelling and query optimisation for production workloads.
- Ship frontend features in Vue 3 and React, focusing on consistent component structure, responsive layouts and page performance.
- Own deployment and release work — Dockerised environments, Linux server configuration and a GitHub Actions CI/CD pipeline that replaced manual deployments.

Web Developer

2021 – 2024

Rokirovka

- Developed and maintained client web applications, translating design requirements into working, responsive interfaces.
- Implemented backend functionality and database integrations, handling authentication, content management and third-party service connections.
- Coordinated directly with stakeholders to scope features, iterate on feedback and deliver releases on schedule.

Projects

ScrollSense

[github.com/TheRealNightmare/ScrollSense]

- Built a sentiment-analysis platform that reads the mood of a social media feed: a browser extension captures posts as the user scrolls and a dashboard turns months of activity into positivity-over-time charts, busiest-hour breakdowns and keyword clouds.
- Fine-tuned an `xlm-roberta-base` transformer to score Bengali-English code-mixed text, addressing severe class imbalance in the training data.
- Unified the browser extension and the web application behind a single account and shared JWT authentication flow.

Technologies: Python, PyTorch, Transformers, JavaScript, REST APIs

PlayerKoi

[github.com/TheRealNightmare/PlayerKoi]

- Engineered a self-tracking physical chess board: an overhead camera on a Raspberry Pi 5 follows a real game and streams live algebraic notation to a built-in web interface.
- Reduced the vision problem to a 3-class per-square classifier (empty / white / black) instead of piece-type recognition, letting the game engine retain piece identity and keeping inference fast enough for real time.
- Gated inference behind a lightweight motion detector and cross-validated every predicted board state against the set of legal moves to suppress misreads.

Technologies: Python, OpenCV, python-chess, Raspberry Pi

Verso 2.0

[github.com/TheRealNightmare/Verso2.0]

- Developed a full-stack digital library supporting in-browser EPUB and PDF reading, collaborative reading rooms and AI-driven book recommendations.
- Built the backend on Laravel 13 with a Filament admin panel for content moderation, user management and catalogue administration.
- Implemented the reader and application frontend in React 19, handling document rendering, progress syncing and real-time room state.

Technologies: PHP, Laravel 13, React 19, MySQL, Filament

Academic Achievements

100% Merit Tuition Waiver

Awarded for outstanding academic performance, 3rd, 4th and 5th Trimesters

50% Merit Tuition Waiver

Maintained across remaining trimesters, ongoing

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, PHP, C, C++, Java, SQL

Frontend: HTML, CSS, Tailwind CSS, ReactJS, Vue, NuxtJs, NextJS, SvelteKit

Backend: Laravel, Django, Fast API, REST APIs, Microservices

ML & Data: PyTorch, Transformers, NumPy, scikit-learn, OpenCV

Tools & DevOps: Git, Docker, Kubernetes, Linux, GitHub Actions, AWS ,Cloudflare, Hetzner
